IMPORTANT NOTES:

Bomanite Micro-Top ST is a two-part, polymer-modified cementitious coating that is applied in two coats by trowel and specialized sprayer to a typical thickness of 3/32 inch. Bomanite Micro-Top ST can be applied in multiple colors utilizing stencils, score lines, taped joints and butt joint patterns that can create distinctive and dynamic designs. Bomanite Micro-Top ST is shown in 16 color blends. For additional color options reference the Bomanite Coloration Systems Standard Color Chart or select the desired color from a Pantone Guide or equal. Refer to the Bomanite Micro-Top ST Technical Bulletin and Application Guideline for additional information and product limitations.

Certain combinations of products and/or colors may produce dramatically different than anticipated color appearances. It is highly recommended that samples be created, viewed and approved using construction techniques and materials identical to those that will be used in the actual construction of the project. This sampling process must be completed prior to specifying the final color and appearance.
